

**Get a head start on spring.  
Apply PrePass™ XC this fall.**

# PrePass™ XC

HERBICIDE

Only fall applied PrePass XC delivers SoilActive™ control for 21 days next spring. For excellent control of a wide range of tough weeds including volunteer canola. Nothing hits harder or lasts longer.

## WHY APPLY PREPASS?

- **Save time.** Get ahead of your cereal crop and unpredictable weather next spring. Reduce your workload now.
- **Hits harder.** Superior control of winter annuals and broadleaf weeds ahead of barley, oats, durum wheat and spring wheat crops.
- **Lasts longer.** Apply any time before freeze-up this fall and you'll see 21 days of SoilActive weed control next spring.
- **Flexibility.** Exceptional control under variable weather conditions and application timing.
- **Multi-modes of action.** Two active ingredients deliver overlapping control of key weeds for superior resistance management.
- **Full service.** Guaranteed by Dow AgroSciences. One solution from one company

## APPLY THIS FALL, CONTROL WEEDS NEXT SPRING

Apply PrePass anytime from harvest until freeze-up for superior control of broadleaf weeds and winter annuals, including: volunteer Liberty Link® and RoundUp Ready® canola, dandelion, narrow-leaved hawk's-beard, cleavers, buckwheat, chickweed, stinkweed and more. Better manage time, weeds and yield by getting a head start this fall.

## HOW DOES SOILACTIVE CONTROL WORK NEXT SPRING?

Cold soil conditions in the fall slow down and eventually stop the breakdown of the SoilActive component in PrePass. As soil warms up again in the spring, PrePass re-activates to begin controlling susceptible weeds again. Fields in which PrePass is applied in late September or \*October can stay clear of broadleaf weeds through April and even May – allowing you to seed earlier into clean fields

## WEEDS CONTROLLED

- |                       |                               |                                 |
|-----------------------|-------------------------------|---------------------------------|
| • Annual sow thistle* | • Hemp-nettle†                | • Shepherd's-purse†             |
| • Canada fleabane†    | • Kochia                      | • Smartweed†                    |
| • Chickweed†          | • Lady's-thumb                | • Stinkweed†                    |
| • Cleavers†           | • Lamb's-quarters†            | • Volunteer barley              |

| • Flixweed†           | • Russian thistle             | • Wild buckwheat†               |
| • Giant foxtail       | • Scentless chamomile         | • Wild mustard†                 |
| • Green foxtail       |                               | • Wild oats                     |

\* Suppression

†Seedling, overwintered rosettes, mature plants up to 30 cm in diameter.

PrePass will not provide extended control of ALS resistant broadleaf weeds.

† Fall and spring SoilActive control

\* In southern Alberta apply PrePass XC after October 1st.

## FALL WEED CONTROL

Winter annual weeds like narrow-leaved hawk's-beard, flixweed, cleavers and shepherd's-purse are hard to control in the spring with glyphosate alone, because they are too big. Dandelion control is most effective after the first fall frost. A fall PrePass application is the best way to control these winter annual weeds.

## ADD VP480

For optimum quackgrass control, add 0.375 L per acre VP480. Plants must have at least 3 to 4 new leaves and show active growth. For optimum Canada thistle control, add 1.125 to 1.50 L per acre VP480. Allow 20 to 25 cm of new growth before application.

## FALL APPLICATION RECOMMENDATIONS

- Apply when plants are still about 60% green and growing.
- Ensure there is minimal soil disturbance after application.

## FALL PREPASS GUARANTEE

We are confident you will be happy with fall-applied PrePass. If you require pre-seed burndown for susceptible broadleaf weeds the spring following a fall PrePass application, Dow AgroSciences will supply 0.375 litre per acre of Vantage Plus MAX II.

*Dandelion*

*Scentless  
Chamomile*

*Flixweed*

*Narrow-leaved  
hawk's beard*

*Cleavers*
